

DEAR COLLEAGUES, OUR STRATEGY FOR ENTERING IN CONTACT WITH THE FOETUS HAS BEEN SABOTAGED.

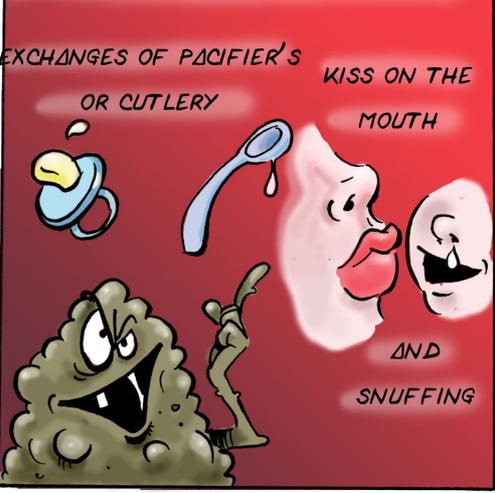

* CYTO MEGALO VIRUS

OUR PRIVILEGED ROUTE OF CONTAMINATION, AS YOU KNOW, IS YOUNG CHILD'S SALIVA, STOOLS, URINE AND TEARS.

THE OPPORTUNITIES ARE NUMEROUS! EXCHANGES OF PACIFIER'S OR CUTLERY KISS ON THE MOUTH AND SNUFFING

BUT THE MOTHERS HAVE REACTED!

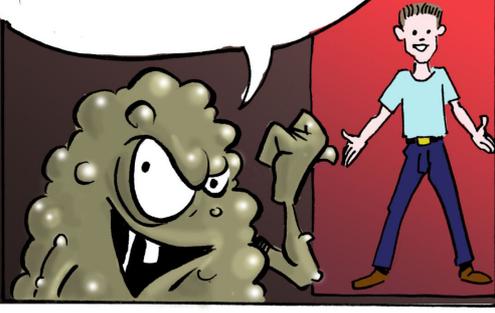

THEY WASH THEIR HANDS AFTER ANY CONTACT WITH A YOUNG CHILD OR A BATH.

THEY DO NOT SHARE THEIR CUTLERY WITH A YOUNG CHILD

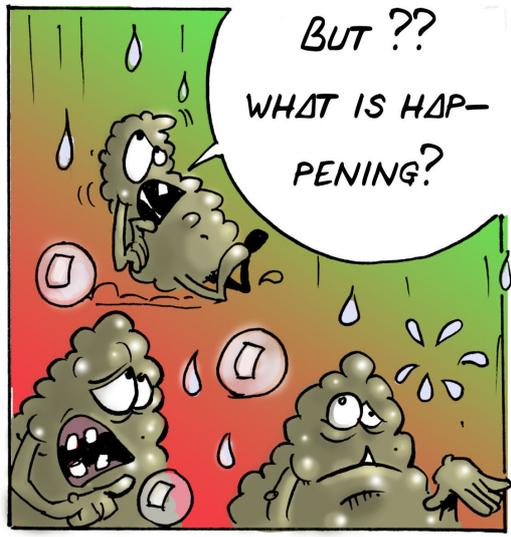

BUT LUCKILY, WE HAVE FOUND A WAY TO CONTAMINATE THE FOETUS! THEIR SPOUSE!

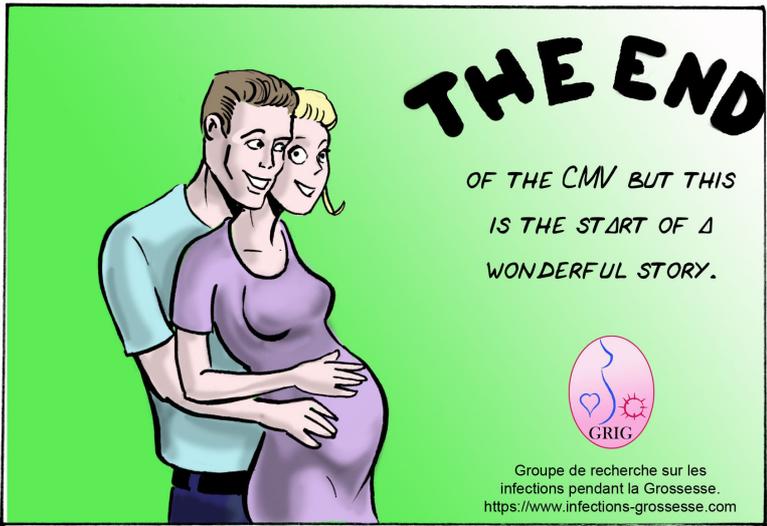

LET'S GO FOR HIM! I SEE ONE!

BUT ?? WHAT IS HAPPENING?

THE SPOUSE IS FOLLOWING THE SAME MEASURES...
